

AQUASOFT

Aquasoft is an oriented software to Thermal resorts, spas, gyms and pools markets where the problematic is simplified by managing data related to the available services and people who acquire them, allowing an organization and planning of the various services taking into account all its surroundings.

With the current concern of the image and wellbeing people increasingly seek steadily health and beauty products, unlike what use to happen previously, when it was a seasonal demand.

Beauty and need for wellbeing are desires shared by everyone, which provides an increased demand for better services and more innovative spaces.

FEATURES

- Registration of users defining the type of card access to acquired services.
- Control of payment deadlines, practiced schedules and the number of entries allowed by card.
- Setting and creation of personal identifications autonomously.
- Classrooms management or treatment at schedules and capacity levels.
- Book scheduling and reservation management for each available service.
- When complemented with other solutions allows to obtain added value on such basic issues as the movement of people, on access to certain places and services (Security Plus), or even in the use of a common card for different consumptions in leisure units, such as access to bar, different treatments or even beauty products.
