## CONSUMPTION MANAGEMENT

In organizations where employees and visitors enjoy a Canteen and Bar, it is essential to have a tool that allows measuring consumption and reservations made in that space.

Providing employees with a quality service, with regard to its operation and daily management, is one of the main concerns of those who manage these services, they are associated with daily constraints in terms of supply, stock management, registration of consumption and reserves per employee, among others.

## SOME FEATURES

- Definition of users / user of the canteen. And their identification via card or biometrics.
- Definition of special days: Vacations, holidays and week-ends;
- Definition of Periods of Meal / Types of meal and associated meals;
- Register Consumption: Spending Registration, per employee, with distinction between meal and extra consumption, allowing you to print a sales slip.
- View and print the general menu of the canteen;
- Meal reservation for the following days;

- Integration with external systems, in particular in assiduity applications;
- Consultations / Exploration of information:
  - Ex: Consumptions made by employee in a certain period of time; Bookings (ordered by date and meal period).

## ADVANTAGES

- Intuitive and easy to use application;
- The application is designed to facilitate the process of service, and is therefore compatible with the use of touch screens;
- Graphical display of all meals and extra products, grouped by families;
- You can attach images to articles, facilitating their identification;
- Consultation Report configuration to the needs of each organization.
