

CASE STUDY

Ansell - Industrial Gloves

Ansell-Industrial Gloves

Ansell is a global leader in protection solutions. This group designs, develops and manufactures a broad range of protection solutions for the hands and arms, clothes and condoms, but the pole situated in Vila Nova de Poiares is dedicated to the exclusive manufacture of gloves. Industry workers, health professionals, patients and consumers around the world invariably associate Ansell top quality products at a great protection and comfort.

To make their vision a reality, Ansell has developed an approach that is based on three main pillars:

- Technological leadership;
- The ongoing dialogue;
- A strong global presence.

Ansell has identified some necessities for which need to be answered, answers that came from Elo through the partner Jorinf.

NECESSITIES

- Equip Ansell with a activation control solution for the forklifts.
- Decrease the effort to control the staff in fulfilling their work.
- Simplify obtaining information about users of the equipment.

GOALS

- Registration and obtaining data of all employees using forklifts;
- Security increased in the use of equipment and the ability to trace the origin of caused damage or equipment problems.

SOLUTIONS

- Software Elo **Security Easy**;
- Supreme XPass terminals (7) connected Secure I / O which in turn are connected to voltage converters.

“The solution allows you to obtain important information on the use of equipment; saves time in investigating problems, and streamlines the use of the forklifts.”

Jorge Manuel Lourenço; Forklift Operator

Portugal – Spain – Cape Verde – Angola – Mozambique – UAE

Solution and how it Works

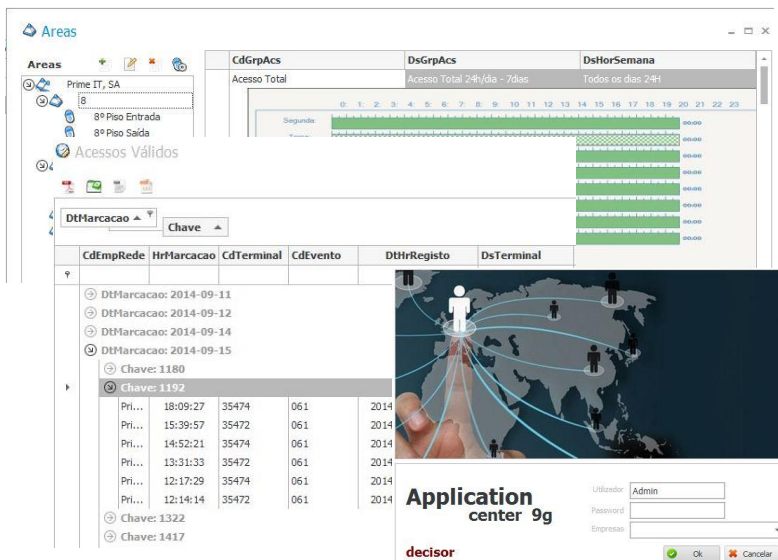

Ansell implemented in their facilities a solution for controlling forklift and other drivable equipment, available from Elo and constitutes Suprema XPass terminal installation connected to Secure I / O which in turn are connected to voltage converters in order to activate the forklift when the user who wants to use the equipment, present his ID card at the terminal. It then validates if the user, is allowed or not, to turn on the equipment. To achieve a greater potential of the solution, from a security and information obtaining point of view, it was installed at Ansell the Security Easy,

a security software from Elo. This software solution is comprehensive to the extent that allows the managers to access data of those who used the equipment and when they did so. So whenever an employee uses a forklift or other equipment, a registration and date when the device was used is recorded.

Benefits

- Increased security in the access to equipment;
- Ability to data acquisition on the usage of the equipment;
- User tracking available in case of equipment malfunction;
- Possibility to know in real time who is using which equipment;
- Increased speed and ease in the process, due to the transformation of manual processes into automated processes.
