

Visitors

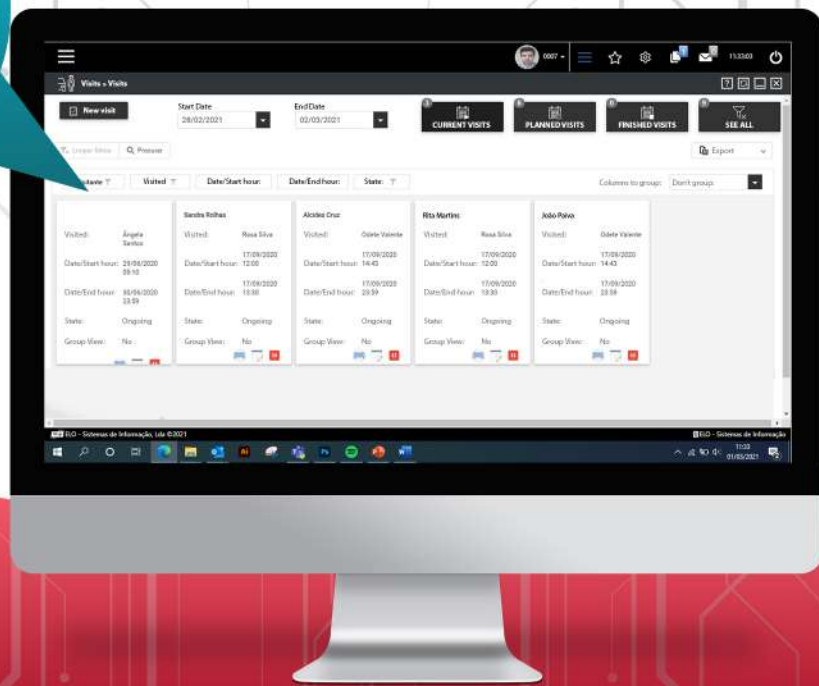

Management tool for controlling the access of people from outside the organization

Nowadays, organizations receive countless visitors that stay at their facilities for a short period of time and with a well-defined purpose.

The success of organizations is a consequence of the relationships they create and maintain with all customers, suppliers, partners and the community in general. Thus, the need for the meeting between both parties is a necessary practice.

VISITORS is a simple and intuitive software that supports the access control of external publics.

The solution enables the monitoring of the duration of each visit, besides storing and making available basic data regarding each person or even who they have been with and for what purpose. It can be stand-alone or a complement to the access control solution Security.

Visitors

FUNCTIONALITIES

- Registration, identification and monitorization of visits.
- Possibility to plan individual or group visits.
- Consultation in real time, which visits are in progress, with an indication of the visitor, visited, subject and starting time.
- Possibility of issuing a Visitor's Card (reusable) based on the duration of the visit.
- Simultaneously with the Security application, in the Visitors software the reception desk can assign an identification to the visitor (RFID Card, Mobile Credential, QRCode...) that will allow temporary access authorization to certain areas of the organization.

Identify your visitors and provide access via RFID, Mobile Credentials or QRCode
