

DASHBOARD

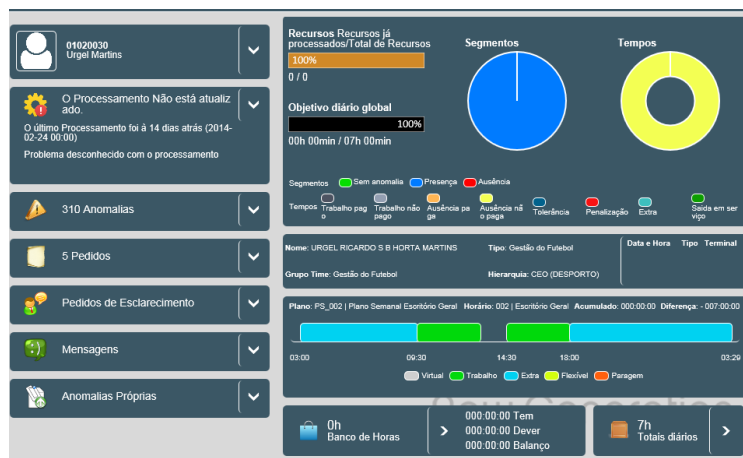

Among the analysis tools and data mining, the Dashboard will have a special focus on the graphic analysis and visualization that allows to the users.

FEATURES

- Applicable to any ELO software independently of the database in use.
- Parameterized features based on queries, allowing the construction of graphical data presented.
- The chart reflects the query obtained in the work environment in use. This query can be handled through filters, formulas and other specific parameterizations.

BENEFITS

- Fast and easy visualization and data seizure, the accuracy and detail are just some of the attributes that make this a versatile tool to support planning.
- Enable graphical construction on specific queries, selecting the variables and format that suits you: bar, pie, line, among others.
- The graphical analyzes allows to replace maps and extensive reports of difficult interpretation.
- Reduction of time spent on analysis and data management.
