

## Warnings

**WARNINGS** is a complementary alert module on ELO solutions aiming to allow the user to make critical decisions and emergency measures.

The triggered alerts are the result of the parameterized and available information on the application software.

Potential circumstances that require some type of intervention:

- Work schedule failure.
- Unjustified absence.
- Failure of planned activity according to the sequence of defined operations.
- Access attempt to unauthorized places or by irregular situations.

### FEATURES

- They are defined by user or users group.
- Applies into any environment, regardless of application and database in use.
- In POP UP format are automatically activated with the application startup.
- In SMS format it can be forwarded to the identified figures without the need of a modem.
- In e-mail format the alert is sent to the defined addresses.
- Provided information by alert is configurable to the needs of the user.
- The role alerts does not generate any interference with the normal functioning of the application.
